

# INSIDE YOUR AMAZING BODY

Your body is amazing! It is made up of millions of cells that make your body parts. Each body part has a special purpose, helping you to stay alive and well.

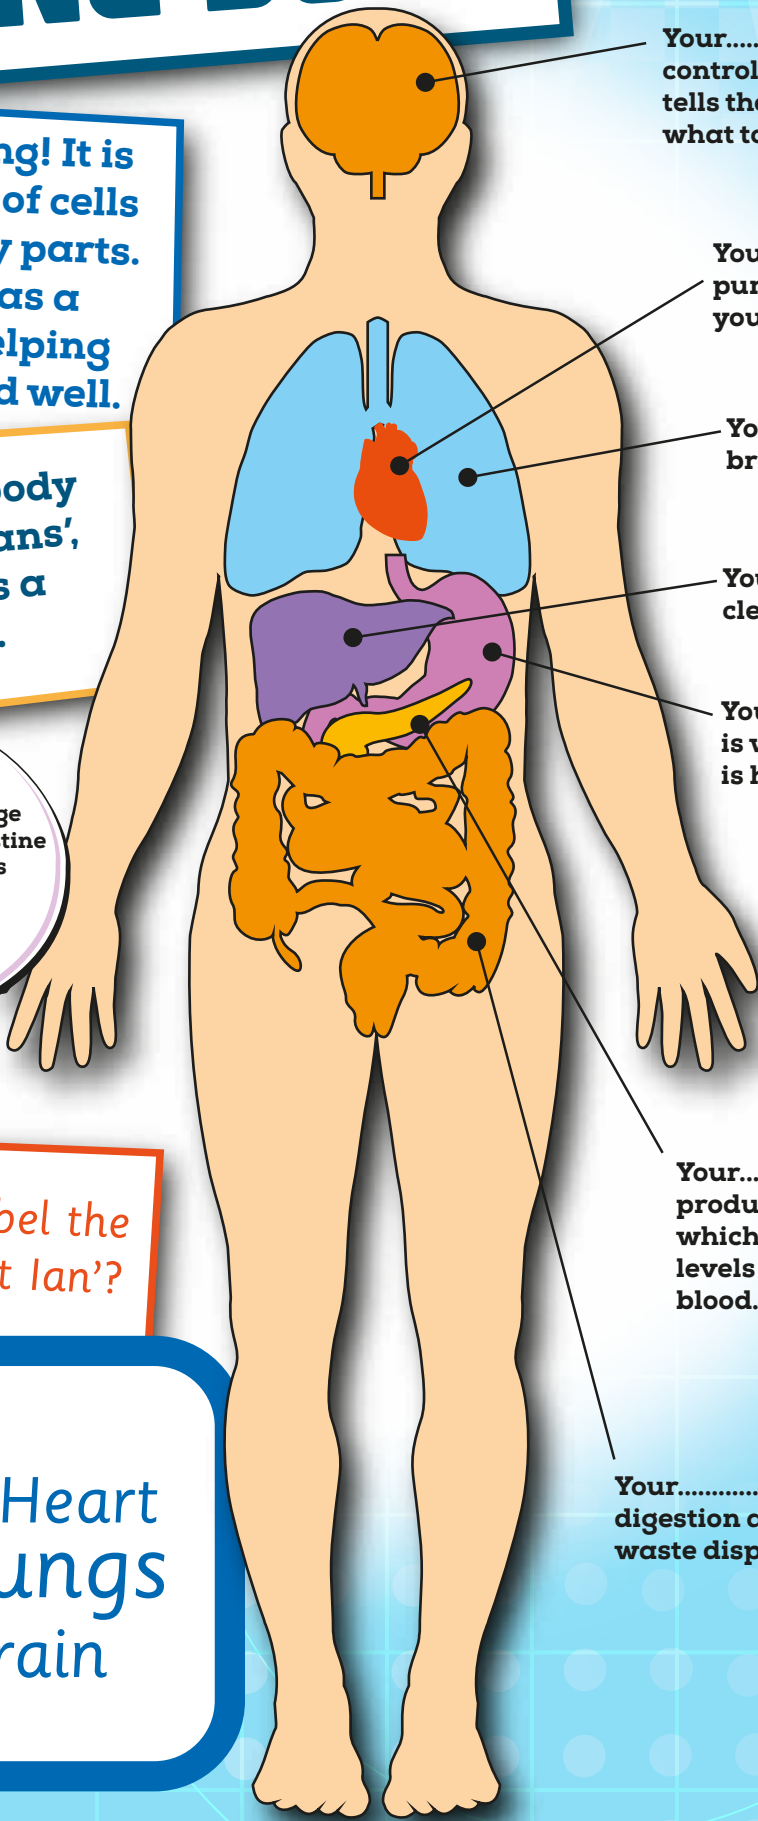

There are some body parts called 'organs', each organ has a different job.

**Percy Fact**  
Your small intestine is longer than your large intestine. The small intestine can be about 6 metres long in an adult.

Can you correctly label the organs on 'Inside out Ian'?

- Intestine
- Stomach
- Liver
- Pancreas
- Heart
- Lungs
- Brain

Your..... controls your body and tells the other organs what to do.

Your..... pumps blood around your body.

Your..... breathe in air.

Your..... cleans your blood.

Your..... is where your food is held and digested.

Your..... produces insulin which controls the levels of sugar in your blood.

Your..... helps digestion and acts as your waste disposal system.
